Architectural Resources provides Historic Preservation services including campus planning, client representation/project management, architectural design/restoration, stabilization and adaptive reuse.

We strongly believe in preserving the rich landscapes and architectural heritage of our communities. Our projects span from small private commercial restoration to large institutional buildings. We have a great deal of experience working with local, state and federal preservation guidelines and maintain excellent relationships with the individuals reviewing projects for entities such as the Preservation Board and SHPO.

Our projects have included work on National Historic Landmark Buildings, Places and eligible sites. Our design work is successful in being sensitive to the historic fabric while meeting the needs of our clients.
